

**Communtu is a web2.0 platform** that eases the installation of additional programs for the Linux distribution Ubuntu.

**The platform for:**

- an easy installation through the selection of tasks you want to do with your computer
- creation of individual bundles, metapackages and Live-CDs
- rating of program bundles
- exchange of experience with programs
- Automatic addition of required keys and package sources

# Communtu

installing Ubuntu made easy

## BUNDEL

According to your selections what you want to do with your computer, Communtu then suggests programs to you which will be installed automatically (this includes adding the sources and keys to the system). At the same time it is possible to refine your selection and receive additional information about single bundles or packages. It is also possible to create your own bundles or even an individual Live-CD.

Donation receipt can be issued.

## DOWNLOAD

### Who does not know this problem?

I want to do a task with my computer (e. g. listening to music or creating fancy graphics) and I don't know which programs to use.

Communtu offers a pre-selection of programs which are suited for the tasks you want to do.

To start the installation, you first click "Download". Now you choose the way you want to install the programs or even Ubuntu with the selected software included:

- If you already have Ubuntu installed you chose the first option.
- If you want to install Ubuntu using a USB key you choose the USB key
- if you want to install Ubuntu using a CD, you choose the Live-CD

When choosing the USB key or Live-CD, you must be logged in to create an ISO file.

On the left hand side you choose the tasks you want to do with your computer. As soon as you have chosen a task, an overview of available bundles will appear to the right.

### Software selection - choose programbundle

To which topic do you look for programs (office, graphics, ...)? Enter your fields of interest and arrange pre-configured bundles. On the right side you can see information about the chosen category.

Complete Installations

☒ Select standard bundles for Graphics/Design

☒ [Graphic](#)

☐ [Graphic \(advanced\)](#)

☐ [Cliparts](#)

☐ [extrafonts](#)

☐ [Krischan's Graphic-Tools](#)

☐ [Swiss Remix \(Graphics\)](#)

☐ [Andi1804\\_myGrafik](#)

For each category, you can select the most important bundles (standard bundles), and/or additional bundles. To see what programs are in a bundle, just hover with your mouse over a bundle name.

Next, you can change the settings of your computer, e. g. which version of Ubuntu you want to use or which GUI (e. g. KDE or Gnome) shall be installed primarily. You can even choose which licenses you want to use, so only free and open source software (like GIMP) or unfree software (like Google Earth) will be installed.

Finally you can either install the bundle directly or you can create an ISO file which has to be burned to a DVD or copied onto an USB key using an appropriate program.

New: My Ubuntu online - soon we will offer the possibility to try out your software selection online in your browser (works with Microsoft Windows as well).
